A comprehensive, platform agnostic, non-disruptive approach

With the growth and diversification of systems, technologies, applications, processes, suppliers, specialized staffing, and regulatory mandates, more organizations than ever look to embark on the cloud journey and modernization of their data center. However, this transformation can invite risk and disruption to processes with unplanned outages, security breaches, and compliance issues.

Simply transferring the IT infrastructure from the data center to a public cloud provider doesn't necessarily deliver the modernization, security, and cost efficiency organizations seek. By advising and guiding organizations on their move to the cloud, Capgemini helps organizations to effectively—and confidently—harness the cloud to accelerate the transformation safely and efficiently with minimized disruption.

Capgemini delivers Data Center Transformation services through a four-phased methodology encompassing Advisory & Analysis, Assessment & Design, Planning & Preparation, and Migration & Execution.

Advisory & Analysis

Our experts work closely with your team to collect and review data, conduct interviews with stakeholders, analyze and define a strategy, and create the high-level financials in the form of a business case.

Assessment & Design

Provides detailed project financials including resource planning, a high-level dependency mapping, risk handling & mitigation, timelines recommendations, migration blueprint, inventory assessment workbooks, and business case updates.

Planning & Preparation

Output of the planning phase includes a migration blueprint & CB planning, preparation of batch run books and assessment workbooks, resource planning & allocation, service windows approvals, etc.

Migration & Execution

The holistic and thorough preparation provided by Capgemini ensures a successfully executed migration that delivers a strong ROI. The final phase is aimed at RFC/batch execution, hand-over to operations, and decommissioning of activities, servers and systems.

The Capgemini approach to data center transformation

The Capgemini approach is comprehensive, platform agnostic, and offers fast return on investment through planning that is balanced, integrated, non-disruptive, and tailored to organizational requirements.

This approach includes:

Access to expert, collaborative teams

Get the right tools to plan an effective transformation from among the thousands of Capgemini's global professional and leading technical partners

A single-source for comprehensive solutions

Leverage expert advice and assistance on implementation – or rely on experts to manage your strategy for you

A global platform for innovation

Access Capgemini's Applied Innovation Exchange (AIE) -- a global platform that enables you to discover, experiment, contextualize, and apply industry-relevant innovations

Better together: Capgemini and Microsoft

As a Managed Gold Certified Partner with Microsoft, Capgemini offers customers a unique set of advantages with a presence in over 35 countries, 5 continents, and supported by more than 24,000 skilled Microsoft professionals.

Capgemini is one of few Microsoft partners that has achieved gold competencies in:

- Cloud Productivity
- Customer Relationship Management
- Data Center

With a complete portfolio of Microsoft cloud solutions, Capgemini supports its customers from cloud strategy development, to managing hybrid environments that deliver a cloud first way of working.

The Capgemini difference

Capgemini is uniquely successful at helping large enterprises in all sectors with complex transformation initiatives and offers a combination of experience, expertise, technical resources, global reach, and business focus to help organizations on their journey.

Capgemini has:

The experience, methodologies, tools, and partners to help organizations manage the overwhelming complexities involved in planning and executing a business-focused data center transformation initiative.

A more efficient and effective approach to data center transformation. Capgemini combines a proven methodology with leading-edge tools, and project accelerators—delivered by transformation experts who work collaboratively with organizations to achieve their business objectives.

A full-scale support network to guide the end-to-end transformation journey – managing all phases of delivery, from strategy and planning to execution and implementation—including business case and business benefit tracking, along with procurement services relating to building new data centers or co-location facilities.
